

ACADEMIA
INNOVATING SIMPLICITY

IMMEDIATE ANTERIOR IMPLANT PLACEMENT

The single anterior tooth is the most demanding implant in everyday practice. Three hours on the guided workflow that makes it predictable.

FACILITATOR

Dr Karthikeyan Ponnusami

BDS, MClinDent (Prosthodontics)

DATE

12 November

6:00 - 9:00 PM

LOCATION

Vivodonto

Unit 3, 44 Brambles Crescent,
Blythe Valley Park, Solihull,
B90 8DJ

CPD

3 HOURS

Verifiable Enhanced CPD

THE CLINICAL PROBLEM

Place it prosthetically and the fixture leaves native bone. Place it biologically and the screw exits the labial face. **The programme is built on resolving that conflict.**

17°
30°

PROFILO ANGULATION

DECOUPLING THE AXES

The Inserta P1 is placed along a deliberately palatal axis so it sits in native bone. The Profilo angulated abutment — 17° or 30°, seated at surgery and never removed — redirects the screw channel to a cingulum exit. Every case is digitally planned and placed through a static surgical guide.

ESTHETIC BIOLOGICAL CONTOUR

The abutment's slim, concave emergence keeps restorative bulk and the implant–abutment microgap well away from crestal bone. Because the abutment is never removed, the definitive crown is delivered above the tissue — protecting the crest while giving an ideal emergence profile.

WHAT YOU WILL TAKE AWAY

Anatomy The anterior maxilla's conflict — and how decoupling the axes resolves it.

Abutment How 17°/30° Profilo abutments achieve a palatal screw-access channel.

Selection Which cases suit the technique, and where it isn't indicated.

Contour Keeping the interface and margin away from bone for ideal emergence.

Workflow CBCT planning and a static guide, through to immediate provisionalisation.

Restorative The pathway to a definitive crown — retrievability and maintenance.

FACILITATOR

Dr Karthikeyan Ponnusami

BDS, MClintDent (Prosthodontics)
Aviva Cosmetic Dentistry, St Albans

Dr Karthikeyan Ponnusami has over 20 years of experience in advanced restorative and implant dentistry. He holds a Master's in Clinical Dentistry in Fixed and Removable Prosthodontics from King's College London and has a special interest in full mouth rehabilitation, implant dentistry, hard and soft tissue grafting, and smile makeovers. In addition to his clinical practice, Dr Karthik helped establish Malaysia's first private dental school and spent several years teaching future dental professionals.

THE THREE HOURS

18:00	Welcome and framing. Why the anterior single tooth is the hardest implant in everyday practice.
18:15	The anatomical conflict. Facial inclination, thin buccal plate and bundle bone; the compromises forced by a straight abutment.
18:45	The Inserta P1 and Profilo solution. Decoupling the implant axis from the screw axis; the 17°/30° set; native-bone placement; one-abutment-one-time.
19:15	Break and networking.
19:30	The workflow, step by step. Case selection and CBCT planning, the static surgical guide, atraumatic extraction, guided placement, immediate provisional.
20:00	Live demonstration on a model. Planning to guided placement, seating the Profilo abutment and the immediate provisional.
20:30	Case gallery and outcomes. Troubleshooting; retrievability and maintenance; open Q&A.
21:00	Close and CPD certificates.

ATTEND

WHO IT IS FOR

Dentists placing implants who want a predictable anterior single-tooth protocol.

Restorative-focused clinicians who want to understand the full implant workflow.

Clinicians new to the Inserta P1 and Profilo system who are considering adopting it.

EVENT DETAILS

Date	12 November
Venue	Unit 3, 44 Brambles Crescent, Blythe Valley Park, Solihull, B90 8DJ
Duration	3 hours
Places	20
CPD	Enhanced, verifiable
Course fee	Complimentary entry

Verifiable Enhanced CPD with stated aims, learning objectives and mapping to Development Outcomes C and D. Certificates are issued at the event.
